

ENVIRONMENTAL POLICY

It is the policy of Caden's to conduct its business in a manner that reflects a commitment towards the protection of the environment and in doing so comply with all applicable environmental laws and regulations, commitment to prevention of pollution and taking into account best practice within the industry.

As a company we are very conscious of our obligation to recognise the effects of any processes, chemicals, emissions and disposal that may have an adverse effect on the environment.

It is intended to make continual measurable improvements to the environmental performance of the company operations. This will be achieved through:

- Reduction in the volumes of hazardous substances used in our process
- Reduction in waste

Caden's environmental policy recognise a long term commitment to update the company practices in light of advances in technology and new understanding of environmental issues or changes in environmental law.

The above cannot be achieved without the commitment and training of all staff with the company and effective implementation of an environmental management system
